

Installation Manual for industrial application

1. Clean the outside of the pipe roughly with a cloth.
2. Wrap 5-6 layers of household foil or other foil around the pipe. No aluminium foil.
3. Wrap enough insulating tape around the foil to ensure that the Merus ring is firmly in place.
 - ! It must be possible to close the half rings completely again.
 - ! There should be no gap at the cut edges.
4. Install the Merus ring according to our standard installation instructions.
5. Wrap 5-6 layers of transparent foil or other foil around the Merus Ring. No aluminium foil.
6. Fix the outer foil with adhesive or insulating tape, so that the Merus ring is protected from splashing water from the outside.
7. Put some insulating tape on the right and left side of the Merus ring. This holds the Merus ring in position and everything is sealed.

- ! Please make sure that the Merus ring is wrapped quite well that no condensation water can be formed under the foil.
- ! In case of strong solar radiation, apply a UV-resistant protection around the complete installation.

<50V/m

Avoid strong
magnetic field

Do not use in
water
